

CompleteSchool CSIS/CALPADS Capabilities

CompleteSchool provides superior California School Information Services (CSIS) capabilities (and soon CALPADS):

1. Because CompleteSchool is new, CSIS support was built-in during design, not grafted on later.
2. In addition to normal data entry screens, CompleteSchool provides screens organized by CSIS Data Dictionary data element identification numbers.

Enrollment History (05)	Attendance (06)	Special Programs (07)	Academic Summary (08)	Testing (09)	Activities/Awards (10)	Discipline (11)
Identification (01)		Demographics (02)		Parent/Guardian (03)		Health (04)
First Name (01.01.02)		Melissa				
Middle Name (01.01.03)		Diane				
Last Name (01.01.04)		Mendoza				
Name Suffix (01.01.05)		01.01.04 - Student's Name - Surname				
State Id (01.02)						
Student Id (01.03)		251				
Migrant Id (01.04)						
Soc Sec No (01.05)		111-55-7777				
Address (01.06.02)		420 W Lambert Rd				
Mail Address (01.06.02)		420 W Lambert Rd				
Address2 (01.06.03)						
Mail Address2 (01.06.03)						
Parsed Mail Street Number (01.06.04)		420				
Parsed Street Number (01.06.04)		420				
Parsed Mail Street Name (01.06.05)		Lambert				
Parsed Street Name (01.06.05)		Lambert				
Parsed Mail Street Type (01.06.06)		Rd				
Parsed Street Type (01.06.06)		Rd				

3. Codes you see throughout CompleteSchool are CSIS codes, so you don't need to learn two sets of codes, and translation tables are rarely needed for submitting extracts to CSIS.
4. Each extract program includes a **Check** function that checks the common problems for that extract. The **Check** function provides a verification report of problems (and likely problems) that it encounters. CSIS provides extensive error reporting, but getting this report is a long process. By quickly checking for common problems, CompleteSchool saves a tremendous amount of time during large submissions.
5. CompleteSchool provides CSIS support to ease the data entry burden. For example, staff assignments for teachers are automatically generated based on the classes those teachers are teaching, and CompleteSchool can determine the NCLB Highly Qualified status for a class section based on the teacher's qualifications (instead of by entering the status for each section).
6. Easily installed CompleteSchool updates include the new CSIS codes, CSIS data support, and CSIS extract programs. These change many times each year.
7. Digitronics Software uses an agile software development process to provide CSIS updates in a timely manner. Fall and Spring submission extract software normally arrives in the update for the month prior to information day. Although software updates are normally delivered on a monthly schedule, updates fixing faults with submission extracts, or reflecting last minute CSIS changes, are scheduled for immediately delivery (or installed directly on customers' servers if necessary).
8. CompleteSchool interfaces well with Personnel/Human Resource Systems. Using our experience building Personnel/Human Resource Systems we built a small portion of a Personnel/Human Resource System into CompleteSchool to make importing data easy. Current CompleteSchool customers can import data quickly by simply selecting a menu item, so no double data entry is necessary.
9. CompleteSchool customers have successfully used CSIS for State-wide Identifiers, CBEDS (Fall Submission), Language Census (Spring Submission), etc. for more than four years.
